# Test Plan for the Library of ODE Solvers (LODES)

Paul Aoanan

October 15, 2017

# 1 Revision History

Date		Version	Notes
October 2017	15,	1.0	Initial draft.

## 2 Symbols, Abbreviations and Acronyms

The following table lists the symbols, abbreviations and acronyms used in the Test Plan. The software library's Commonality Analysis (CA) tables provide supplementary items in addition to the ones listed below.

symbol	description	
CA	Commonality Analysis	
IDE	Integrated Development Environment	
IVP	Initial Value Problem	
ODE	Ordinary Differential Equation	
LODES	Library of ODE Solvers	
SRS	Software Requirements Specification	
Τ	Test	
О	Output	

Table 1: Symbols, Abbreviations, and Acronyms used in the Test Plan

### 3 General Information

The following section provides an overview of the Test Plan for the Library of Ordinary Differential Equation (ODE) Solvers.

This section explains the purpose of this document, the scope of the system, and an overview of the following sections.

### 3.1 Purpose

The main purpose of this document (the Test Plan) is to describe the verification and validation process that will be used to test the functionality of LODES. This document closely follows the requirements and governs the subsequent testing activities. This document is intended to be used as a reference for all testing and will be used to increase confidence in the software implementation.

This document will be used as a guide and starting point for the Test Report. The test cases listed in this document will be executed and the output will be analyzed to uncover errors, increase confidence and correctness in the software.

#### 3.2 Scope

The scope of the testing is limited to the Library of ODE Solvers. Given the appropriate inputs, each program in LODES is intended to find the solution to an Initial Value Problem (IVP).

#### 3.3 Overview of Document

The following sections provide more detail about the testing of LODES. Information about the testing process is provided and the software specifications that were discussed in the Commonality Analysis are stated. The evaluation process that will be followed during testing is outlined and test cases for both the system testing and unit testing are provided.

## 4 Plan

This section provides a description of the software that is being tested, the team that will perform the testing, the approach to automated testing, the tools to be used for verification, and the non-testing based verification.

## 4.1 Software Description

The software being tested is the Library of ODE Solvers. Given the ODE, initial values of x and y, and the final value of x, the programs calculate the final value of y through the use of numerical methods.

#### 4.2 Test Team

The test team that will execute the test cases, write and review the Test Report consists of:

• Paul Aoanan

#### 4.3 Automated Testing Approach

#### 4.4 Verification Tools

The verification tools to be used will be the following:

#### 1. Unit Testing Framework

A Unit Testing Framework designed in MATLAB that will compare MATLAB's own functional programs with LODES' running the same inputs will be implemented.

#### 2. Static Analyer

The program's IDE (MATLAB) will be used as a Static Analyzer tool for program debugging and for checking syntax errors.

#### 3. Continuous Integration

The source code and the project repository is located in GitHub at: https://github.com/aoananp/cas741/. It provides the Build Server functionality to fully maintain and document the software through its lifecycle. As well, it provides the compare functionality for future regression testing and analysis of code updates.

[Thoughts on what tools to use, such as the following: unit testing framework, valgrind, static analyzer, make, continuous integration, test coverage tool, etc. —SS]

## 4.5 Non-Testing Based Verification

The LODES will undergo

#### Code Inspection The LODES will initially h

[List any approaches like code inspection, code walkthrough, symbolic execution etc. Enter not applicable if that is the case. —SS]

## 5 System Test Description

### 5.1 Tests for Functional Requirements

#### 5.1.1 Initialization

Paragraph

#### 1. FT-1

Type: Functional, Dynamic, Manual, Static etc.

Initial State:

Input:

Output:

How test will be performed:

#### 5.1.2 Area of Testing2

. . .

## 5.2 Tests for Nonfunctional Requirements

#### 5.2.1 Area of Testing1

Title for Test

1. test-id1

Type:

Initial State:

Input/Condition:

Output/Result:

How test will be performed:

2. test-id2

Type: Functional, Dynamic, Manual, Static etc.

Initial State:

Input:

Output:

How test will be performed:

#### 5.2.2 Area of Testing2

. . .

## 5.3 Traceability Between Test Cases and Requirements

## 6 Unit Testing Plan

[Unit testing plans for internal functions and, if appropriate, output files—SS]

## 7 Appendix

This is where you can place additional information.

## 7.1 Symbolic Parameters

The definition of the test cases will call for SYMBOLIC\_CONSTANTS. Their values are defined in this section for easy maintenance.

## 7.2 Usability Survey Questions?

This is a section that would be appropriate for some teams.
